Introduction

Peter John

- BS in Computer Engineering, Georgia Tech
 - Graduating December 2017

Self-Service Platforms

- Chris Morris – Director
- Team Responsibilities
 - Cricket Website
 - myCricket App
 - Internal Onboarding Tools

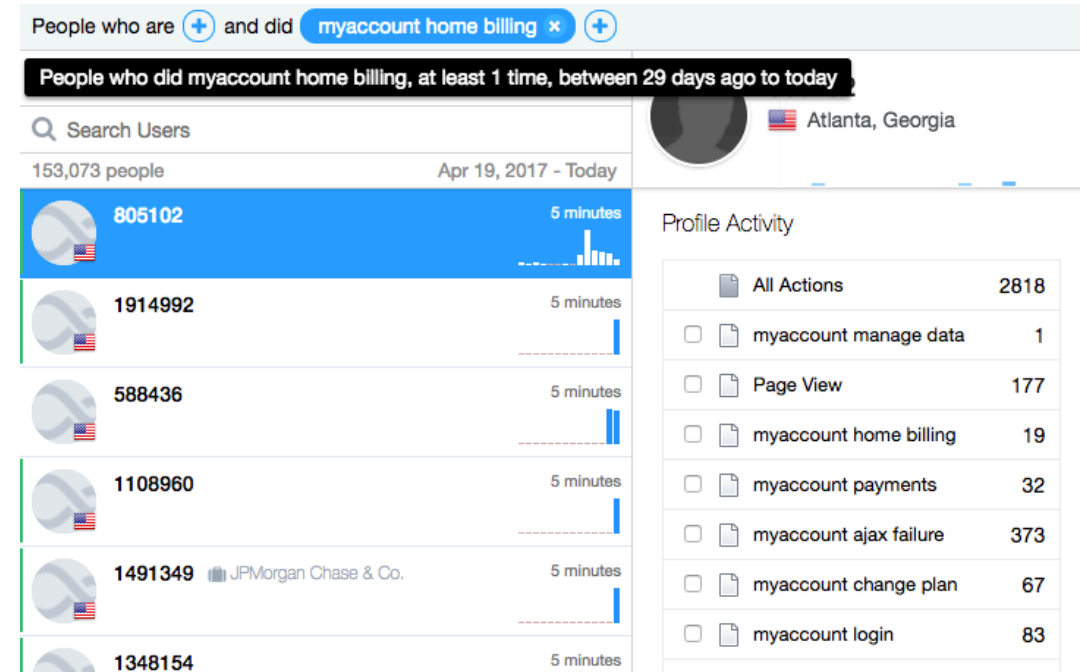

Project Goals

Aim towards Simple, Smarter, and Better Analytics

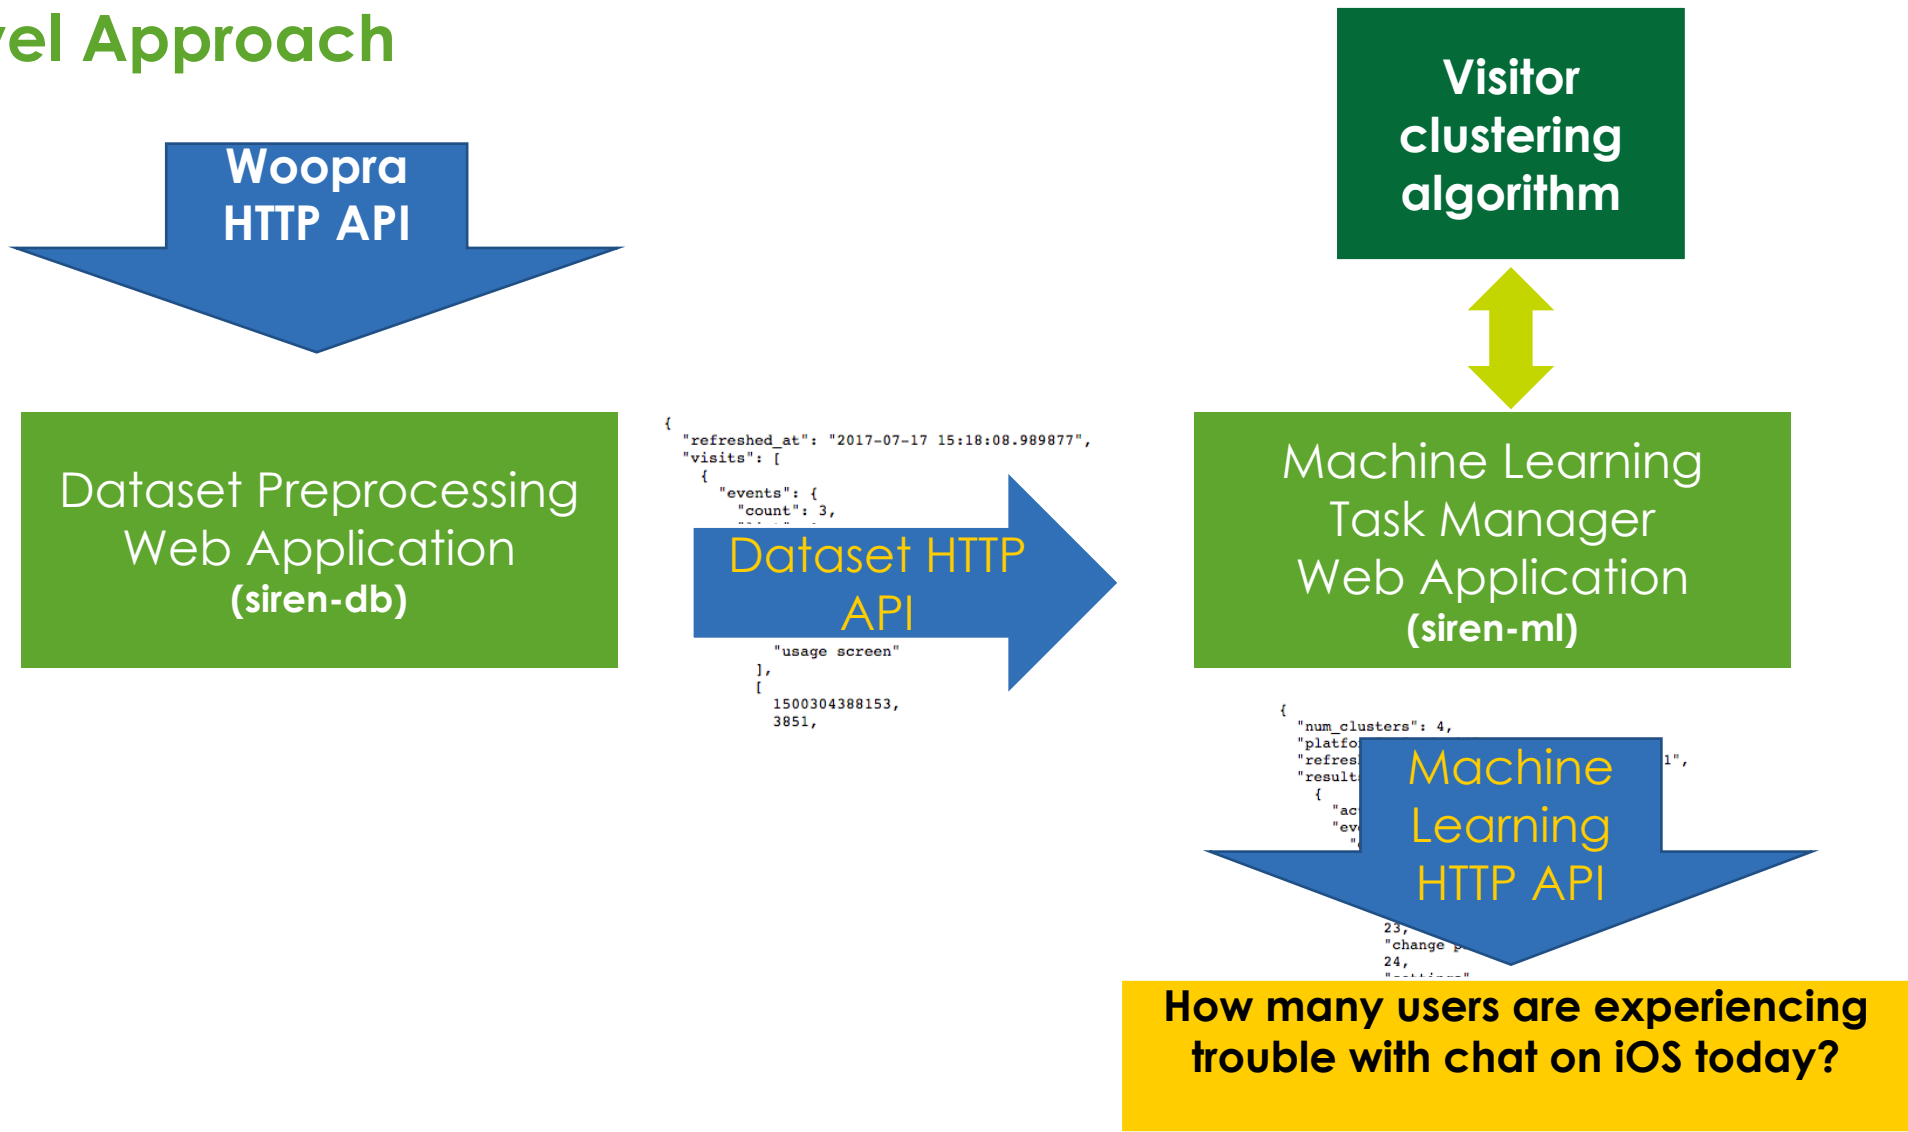

Woopra- Analytics for Self-Service Applications

- Tracks visitors and events
- Searchable through a web interface
- Does not provide
 - Context for each user's visits
 - "Unusual activity" detection
 - Can be useful to find unintended app interactions
 - Smarter user grouping outside of individual fields
 - Operating system, app version, browser, etc..

Goal: Interact with the Woopra API and use Machine Learning to address these issues

High Level Approach

Machine Learning

How do I automatically categorize visitors?

Model Properties

- Unsupervised k-means organizes unclassified data automatically by using chosen features
- “two-action” sequences used to distinguish between activity purposes
- Most common “two-action sequences”, number of actions performed, and the first action of each visit is used to cluster visits

Clustered “two-action” sequences

Clustered Visitors

Web APIs

Dataset Preprocessing JSON API(siren-db)

- Provides an easier interface for using Woopra API
 - Separates iOS/Android logs
 - Creates formatted datasets for machine learning web service
 - Flask for Python for API endpoints, MongoDB to cache actions and indexes

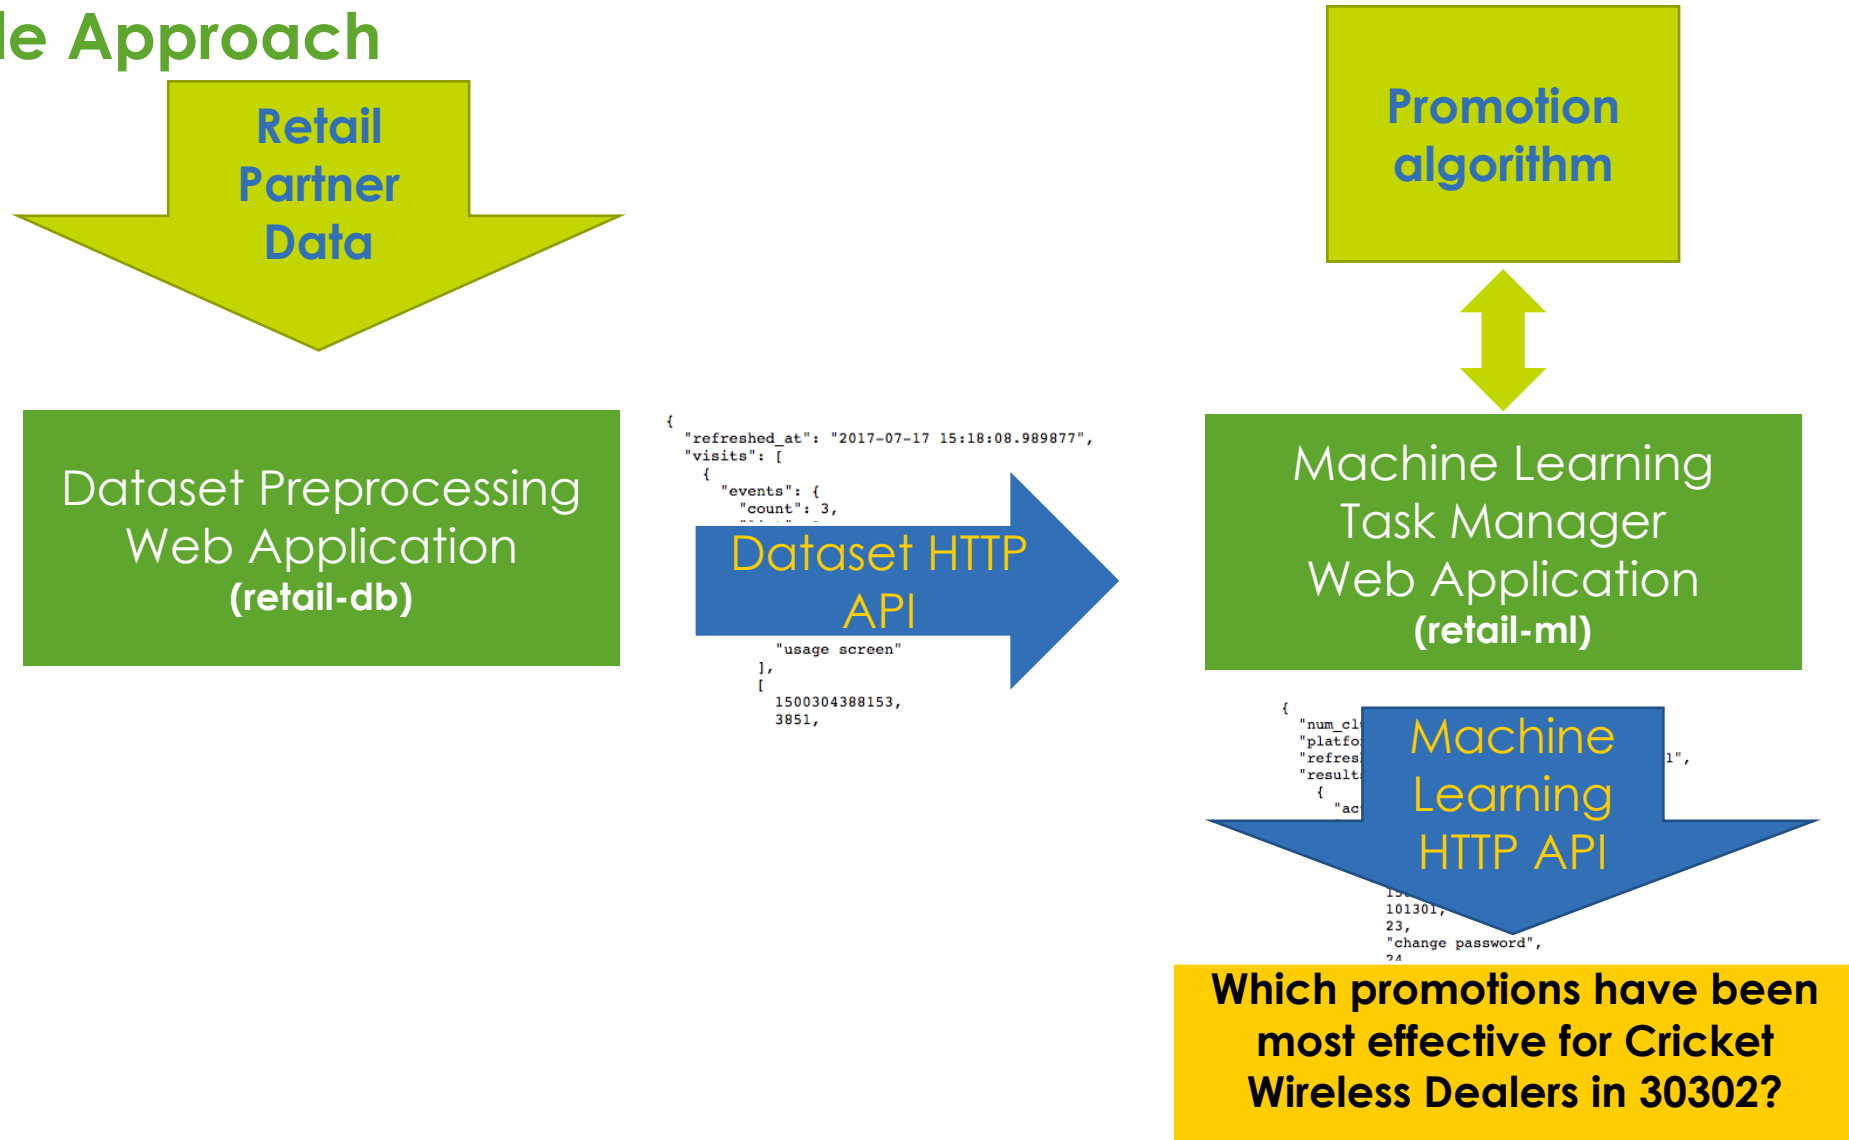

Machine Learning Task Manager(siren-ml)

- Returns cluster results per platform using datasets from siren-db
 - Flexible URL Parameters
 - Queue ML background tasks
 - API endpoints return JSON data
 - Flask for Python, scikit-learn for clustering, Redis Queue to manage tasks

A Flexible Approach

The Internship Experience

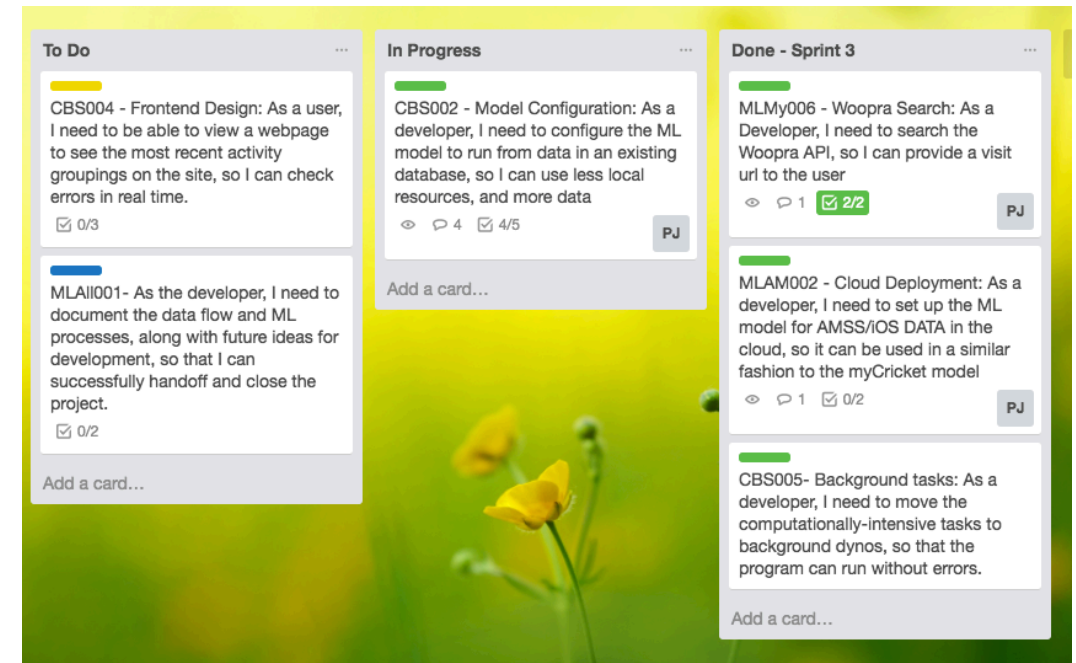

Agile Development and Active Learning

Personal Background

- Previously exposed to basic machine learning and Python
- No prior experience with current project

Daily Work

- Agile Scrum
- Self-learning from documentation, existing code samples, communication with Cricket Wireless team members
 - Surveyed Academic Publications
 - Cricket Resources
 - Shared resources

Personal Challenges

The rewarding aspects of my experience this summer.

Maximizing Impact while Limiting Scope

- Limited timeframe
- Easy to expand project without considering the time needed to complete or accommodate new features
- Scrum process was very helpful

Reaching out to resources at Cricket Wireless

- “sandbox” project by nature, not as immediately applicable for Self-Service team members
- Received good feedback from team members
 - Database usage, Woopra support, Microservices

Takeaways

- Exposed to Agile Process
 - Process overhead for single-person team
 - Perspective for future project management
- Immense growth in technical knowledge
 - Debugging and deploying applications that run on a PaaS
 - More involved version control
 - More consistent JSON API structure
 - Applicable for personal projects and future career search
 - Pursuing Node.js in spare time
 - Researched Microservices for larger scale applications
